EDUCATION

University of Southern California, Viterbi School of Engineering – CGPA: 3.72/4.0 Los Angeles, CA
Master of Science in Computer Science Aug 2025 – May 2027
Coursework: Analysis of Algorithms, Web Technologies, Machine Learning, Software Engineering, Database Systems, Applied NLP
Leadership: Full-stack board member of Grand Challenges Scholars Program (GCSP), building GCSP Connect

BNM Institute of Technology – CGPA: 9.84/10 Bengaluru, India
Bachelor of Engineering in Computer Science Nov 2021 – Jun 2025
Awards: Gold Medalist (Dept. Rank 1), Best Project Award (ISL Interpreter), Merit Scholarship (5 semesters)

TECHNICAL SKILLS

Languages: Python, Java, C++, Kotlin, JavaScript, TypeScript, SQL
Backend & APIs: FastAPI, Flask, Node.js / Express, REST APIs, Pydantic, Gunicorn
Frontend: React, Angular, Tailwind CSS, Vite, Jetpack Compose (Android)
Databases: PostgreSQL, MySQL, MongoDB, Supabase, PGVector
Cloud & DevOps: Google Cloud (App Engine, Cloud Run, Cloud Tasks), Vercel, Docker, GitHub Actions, CI/CD, Linux
AI/ML: TensorFlow/Keras, MediaPipe, OpenCV, Gemini API, LangChain, RAG, Vector Embeddings
Tools & Practices: Git, Playwright, Agile/Scrum, Jira

EXPERIENCE

Synamedia Pvt. Ltd. — *Graduate Software Engineering Intern* Feb 2025 – Jun 2025

- Cut daily backtrace-error triage from **1.5 hours to under 10 minutes** by building a self-triggering pipeline that uses **Playwright** to pull error reports and **Python** to classify each as new or recurring, containerized with **Docker** for isolated, reproducible runs.
- Supported **Agile sprint planning** across the engineering team by building automated weekly **Power BI** reports from the classified error data to surface error trends.

Technodysis Pvt. Ltd. — *Robotic Process Automation Intern* Oct 2024 – Jan 2025

- Reduced per-report turnaround from **1-2 hours to 15 minutes** by building **10+ Power Automate workflows** that process Outlook files, run Excel calculations, and distribute reports from a single email trigger.
- **Owned the full development lifecycle** from gathering requirements in client meetings to production deployment, designing resilient bot logic with data validation and exception handling to reliably process inconsistent input formats.

PROJECTS

RoleReady Jan 2026 – Apr 2026

- **Reduced manual onboarding effort by half** by building a full-stack platform (**Angular 21, FastAPI**) that turns GitHub, Jira, and Confluence content into interactive training assets like summaries, mind maps, and video walkthroughs.
- **Stabilized end-to-end generation** by architecting a **LangChain RAG pipeline** that retrieves PGVector embeddings from Supabase to feed Gemini.
- **Enabled parallel asset generation** by offloading long-running jobs to **asynchronous GCP Cloud Runners**, removing request timeouts under load, containerized with **Docker** and shipped via **GitHub Actions CI/CD**.

Event Search Sep 2025 – Dec 2025

- Shipped one event-discovery product **across web and native Android (Vanilla JS + Flask on GCP App Engine, React SPA, Kotlin/Jetpack Compose)** by unifying live data from the Ticketmaster, Spotify, and Google Maps APIs.
- Engineered **fast, secure browsing across sessions** by splitting the backend into **microservices**, a Flask API-key proxy and a **Node/Express + MongoDB** favorites service, with **React Query** caching for persistent favorites.

PromptQuest / 1st Place (Vercel Category) GoodVibesOnly Hackathon Nov 2025

- Built a gamified web app (**React/TypeScript, Vite, Radix UI**) that **scores players' prompts in real time**, returning Gemini-backed feedback within 5s against a 6-dimension rubric on a 0-100 scale.
- Removed **cold-start and local-dev friction** by deploying a decoupled architecture, a static **Vercel** frontend with a Dockerized **Flask/Gunicorn API** on **GCP Cloud Run**.

Indian Sign Language Interpreter / Published in a Springer Journal Jan 2025 – Apr 2025

- Achieved **92.8% recognition accuracy** by building a real-time ISL interpreter (**Flask, TensorFlow/Keras**) with a dual gesture/word model pipeline and **Natural Language Toolkit (NLTK)** word validation.
- Enabled **live gesture capture** by tracking hand landmarks with **MediaPipe** and serving webcam inference through **OpenCV**, with **MongoDB** tracking user progress and learning history.
